Recap

Persona is a chat site with a focus on connecting random people to interact, meet, and learn about different lives, all without compromising your data.

Randomized Match-Making

Users are matched randomly. You cannot choose who to interact with. Simply put, you activate our service and we match you with another user to message.

Limited Time Interactions

In order to make the most out of your interactions, Persona offers time-restricted chats to respect your time, but also ensuring chats are meaningful.

Prioritizing User Data Security

User data is not respected in today's social media environment. Your vital information is easily found online and we want to ensure our users don't have to worry about even their usernames being out there for people to track.

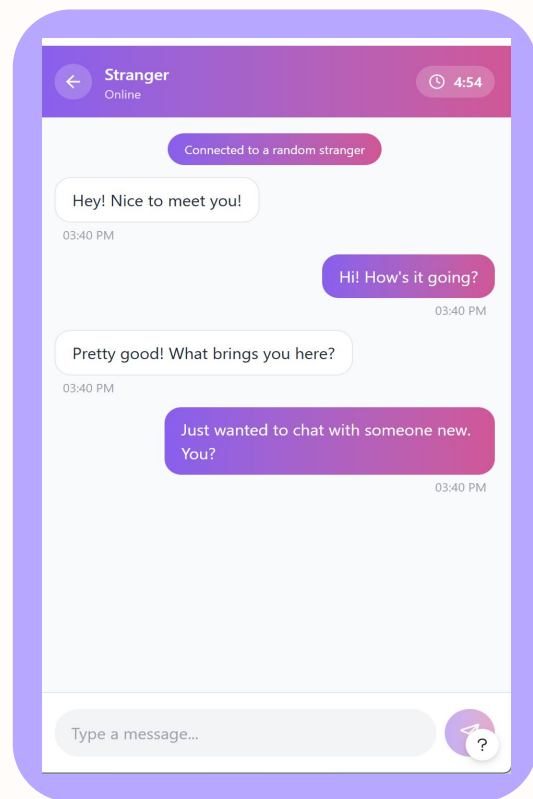

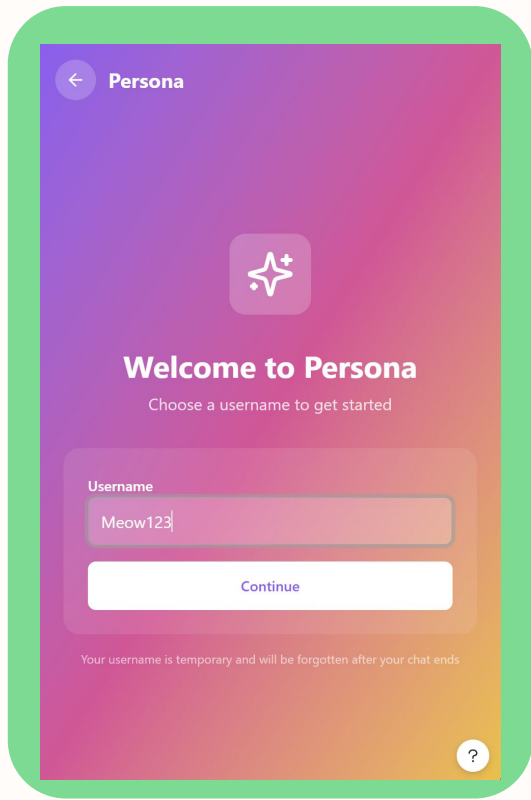

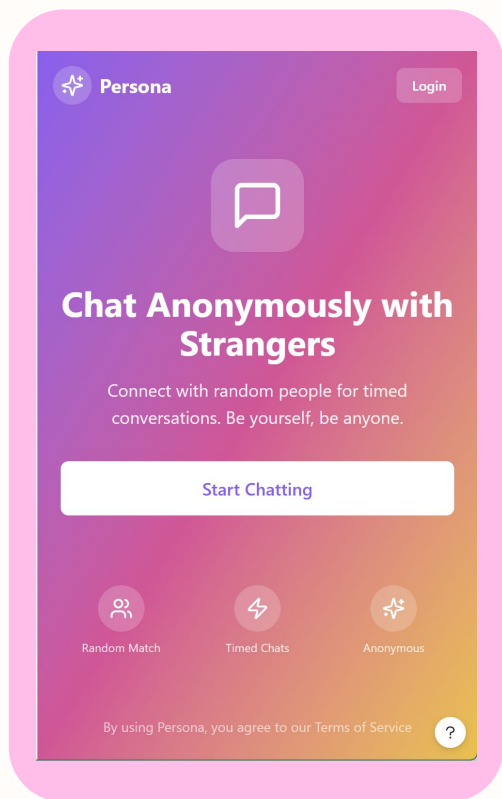

Problem Framing

Intuitive
Onboarding

Keeping
components
reusable

Disconnected
Backend

UI Overview

My Contributions

UI Features

- Onboarding flow
- Chat & landing page screen layouts
- Reusable Components (Button, Input)

Tech & Structure

- React + TypeScript
- Tailwind CSS styling system
- Component-based architecture
- Routing with React Router

Project Organization

- /pages → Screens
- /components → Reusable UI
- /routes.ts → navigation

Current Challenges

No
Connected
Backend

Chat Logic

Hardcoding
Risks

```
const [username, setUsername] = useState("");  
  
if (!username) {  
  disableStartButton();  
}
```

Simulating User Interaction

Next Steps

**UI
Improvements**
